<b>Prerequisites:</b>	
<b>Conditions for passing the subject:</b> The subject is finished by an written exam (test). For assessment A should be obtained at least 90 points, for assessment B at least 80 points, for assessment C at least 70 points, for assessment D at least 60 points, for assessment E at least 50 points. Credits will not be granted to students who obtain less than 50 points.	
<b>Results of education:</b> Within this subject students are familiar with the construction and principles of operation of computers, the computer architecture. Students gain a deeper understanding of traditional Von-Neumann architecture. Attention is paid to the technological milestones that have been the basis for the development of processors and computer components. The ways of cooperating of base units, principles of their operation and application areas with regard to current trends are explained. Attention is also paid to theoretical background and demonstrations of specific problems solutions in the context of current trends in the field.	
<b>Brief syllabus:</b> The meaning of computer architecture. Boolean algebra, logic elements. Logic circuits - design and realization Building blocks of digital systems Computer memory, registers. Data types, mathematical operations, Arithmetic logic unit, executing instructions (instruction cycle). Bus types, principle of operation, serial and parallel bus (FSB, PCI, PCIe, HT, QPI), characteristics I/O, I/O operations, performed in the storage unit DMA. I/O channel. IRQ system. Pinciple of operation DRAM, SRAM, ROM a EEPROM. Virtual machine - construction and operating principles. Intel, AMD, IBM a ARM processors, their architecture and development trends. Multi-core processors - development, implementation reasons, restrictions on use.

<b>Results of education:</b> After successfully completing the course the student is familiar with basic structures and functions of operating systems, user interfaces, the work in an operating system UNIX and Windows. He masters the operating system of single-user computers: 16-bit, 32 and 64-bit operating systems, processes, memory, file system, as well as the corresponding system terms of these functions. He learns the basic methods and algorithms used in the design and construction of operating systems that he can use in his practice.	
<b>Brief syllabus:</b> Introduction to the Operating systems, basic terms. History and classification of operating systems. Architecture of operating systems. Programming and user interface. Managing files and directories - name and file attributes. User rights, work with files and directories. Management and structure of disk devices. Management of resources. Management of processors and processes. Parallel processes - planning, communication and synchronization. Management of memory. Virtual memory management, memory segmentation.

<b>Level of study:</b> I.	
<b>Prerequisites:</b>	
<b>Conditions for passing the subject:</b> During the semester students gain experience in programming in the microworld Imagine Logo and create custom animation in a graphical environment LogoMotion. Students from the mid-semester independently solve the programming tasks - semestral project of which outcome should be an own didactical project in Imagine. During the semester, students have the opportunity to consult his project (phase of creation) with teacher. At the end of the semester they submit the finished educational software (the electronic version), that is evaluated. Students must before classmates present and defend their project by an open discussion. Students are classified according to the average obtained in the overall assessment of the continuous preparing during the semester (50%) and according to the project (50%). For obtaining the classification A must be obtained at least 90% share of average, at least 80% for B, for C at least 70%, at least 60% for D, for E at least 50%. Credits for subject will not be assigned for the student, who is not at least 50% successful of the individual parts.	
<b>Results of education:</b> After successful completion of the course the student acquire an overview about the possibilities of teaching programming at the different types schools and levels of education through children's programming languages (microworlds), which can help in developing algorithmic thinking and acquire programming experiences in a playful way.	
<b>Brief syllabus:</b> <ul style="list-style-type: none"> <li>• Teaching programming at different levels and degrees of education.</li> <li>• Place children's programming languages in the educational process.</li> <li>• Turtle Graphics - turtle, animated turtle.</li> <li>• LogoMotion - animation, timing, phase of turtles.</li> <li>• Basic control commands and elements of the program Imagine.</li> <li>• Data types - variables, texts, buttons and work with them.</li> <li>• Commands for the individual objects.</li> <li>• Sub-programs - their own procedures.</li> <li>• Events of individual objects, event response.</li> <li>• Conditions for process control.</li> <li>• Overlapping of objects, object testing.</li> </ul>	

- Multimedia options of the Imagine environment - working with the sound and video.
- Planning and implementation of projects - didactical applications.

<b>Name of the university:</b> J. Selye University	
<b>Name of the faculty:</b> Faculty of Education	
<b>Code:</b> KMI/Idb/ PR1/15	<b>Name:</b> Programming 1
<b>Types, range and methods of educational activities:</b> <b>Form of study:</b> Lecture / Seminar / Practical <b>Recommended extent of course ( in hours ):</b> <b>Per week:</b> 2 / 0 / 2 <b>For the study period:</b> 26 / 0 / 26 <b>Methods of study:</b> present	
<b>Number of credits:</b> 5	
<b>Recommended semester/trimester of study:</b> 1.	
<b>Level of study:</b> I.	
<b>Prerequisites:</b>	
<b>Conditions for passing the subject:</b> During the semester, students write two practical assessments. Students also solve some programming projects individually at home. The activity of students in classes is also taken into consideration, so students can get plus points. In practical assessments and programming project students need to achieve a minimum of 50%. Using all these assessments, the teacher of seminars prepare students continuous evaluation. The exam consists of a practical and theoretical programming tasks. Students in exam have to reach also a minimum of 50%. The final grade is calculated as a mean of continuous evaluation and exam mark. For the classification A at least 90%, for B at least 80%, for C at least 70%, for D at least 60%, and for E at least 50% must be obtained. Those students, who did not achieve the minimum 50% from any part, do not finish the course successfully.	
<b>Results of education:</b> After successful completion of course, students will know the fundamentals of structural programming, will be able to write algorithms as sequence of logical steps to different problems, draw flowcharts, and rewrite them into programs. Students will have experiences in the usage of programming environment, practice in programming using standard control structures and functions.	
<b>Brief syllabus:</b> <ul style="list-style-type: none"> <li>• Algorithmization - Basic features of algorithms, forms of creating and expressing algorithms.</li> <li>• Oral and graphical expression of algorithms.</li> <li>• Basic elements of algorithms, and their usage.</li> <li>• Programming - The structure of programs in programming language. Syntax and semantics.</li> <li>• Data types, representation of standard data types in the programming language.</li> <li>• Standard data structures, basic commands.</li> <li>• Standard functions and procedures.</li> <li>• Programming, solving tasks (sorting algorithms).</li> <li>• Procedures and functions: hierarchy of program structure. Defining own functions. Global and local variables.</li> <li>• Procedures with and without parameters.</li> </ul>	

- Extending the concept of data types using additional standard types and structures, their importance in solving problems (enumerated types, sets, files, etc.).
- The file, as useful tool of exchanging data between programs and their environment. The structure of files, declaration of files, file types, accessing files, operation on files.
- Standard procedures for processing files. Methods of file handling.
- Complex solution of problems.

<b>Level of study:</b> I.	
<b>Prerequisites:</b>	
<b>Conditions for passing the subject:</b> Students during the semester independently solve a programming tasks - semestral project of which outcome should be an own educational software. During the semester, students have the opportunity to consult his project (phase of creation) with teacher. At the end of the semester they submit the finished educational software (the electronic version and the instructions for use), that is evaluated. Students must get at least the 50% of the total evaluation, to be allowed to pass the examination. The exam is combined and consists of practical part - presentation of the finished educational software and verification of theoretical knowledge from creation of educational software. The students, to be classified, must be also successful at least 50% on the exam. Students are classified according to the average obtained in the overall assessment of the continuous preparing (semestral project) during the semester (50%) and according to the exam (50%). For obtaining the classification A must be obtained at least 90% share of average, at least 80% for B, for C at least 70%, at least 60% for D, for E at least 50%. Credits for subject will not be assigned for the student, who is not at least 50% successful of the individual parts.	
<b>Results of education:</b> After successful completion of this course the students are proficient in basic of creation of educational software, they are able to select the right algorithm for solving the problem, they know the pedagogical and psychological aspects of creation of educational software. They are aware of the features of the computer in different forms and phases of learning and are able to choose and skillful use appropriate programming environment (optionally also combine different environments) for the creation of educational software for some topic. They master rules for a correct creation of software product documentation.

<b>Conditions for passing the subject:</b> The students have to attend 80 % of the lectures. Two written examinations are needed to be absolved, which are composed by the lectures and required literature.					
<b>Results of education:</b> The purpose of the subject: To introduce the establishment of Church, the initial phases of the development of Church, at the area of ancient culture. We do this via the literature sources and authoritative historical works. We aim to illustrate, how did the Hellenistic civilization receive the gospel of Jesus Christ. The curriculum surveys the history of Church from the persecution until the early Middle Ages. Introduces the important ecclesiastical personalities and the ecumenical synods. It is also concerned with the liturgical development of the Church.
